polish: native
english: advanced

ABOUT ME

Since primary school, where I took part in extracurricular Turbo Pascal courses, coding became my passion.
Programming classes in high school were a key moment for development of my coding skills, where I have come into contact with many coding languages, including PHP, Visual Basic, ASP.NET and C++.
I decided to develop a web application after high school and this started a carrer and passion that continues to this day with a focus on the backend side.
In my free time I follow the latest news in application development and new programming technologies.
Alongside programming I'm in love with mountainbiking and downhill racing that allow me to break away from my day-to-day duties and provide me with a healthily well-spent time with same focus, commitment and goal oriented mindset that I will bring to the company.

§ LEGALNOTE
